

RUST KUTTER™

Drive your sales
with a
Rust Kutter Display!

Rust Kutter stops costly rust and corrosion.
Rust Kutter primes metal... it is not paint...

It is a balanced formula that causes rust to chemically change to phosphate, which turns the metal black...

A coat of paint then attaches itself so closely to the metal that moisture and oxygen cannot attack the surface, which results in a much longer lasting paint job.

It is a simple step-by-step process

1. Scrape loose paint with a wire brush
2. Spray on Rust Kutter
3. Allow to dry

Brush away residue and the surface is now ready to paint.

Rust Kutter spreads easily and covers a larger area than paint because it is as thin as water.

One gallon covers approximately 600 ft.

Rust Kutter is effective for both exterior and interior work.

Finally the answer for antique car restoration, for dissolving bleeding rust from porcelain, tile, marble and masonry, for agricultural equipment, marine equipment, structural steel, galvanized buildings, roofs and more.

RUST KUTTER™

Rust Kutter Directions for Use:

1. Select the surface to be treated
2. Remove any loose rust using a wire brush or wire wheel. Rust must be present on surface for Rust Kutter to work. Do not grind to bare metal.
3. Shake Rust Kutter to insure proper mixing as some ingredients may have settled during shipment.
4. Spray Rust Kutter on the surface allow 24 hours to dry.
5. Rinse treated surface with water and allow to dry.
6. Brush off any loose residue.
7. Select a quality paint suitable for metal surfaces. Priming is not necessary, but can be applied if desired.
8. Enjoy your newly painted surface for many years without the fear of rust returning.
