Crystal Blue water soluble bags will give your pond a beautiful blue tint enhancing the appearance of your pond. This pouch includes (1) 6.8 ounce water soluble bag which treats 1/4 acre foot or 1/4 of an acre with an average depth of 4-6 feet deep. Reapply in 30 days or when color dissipates. For best results, apply when water temperatures are 65°F or warmer and after initial dose of liquid Crystal Blue dye has been applied earlier in the season. Water soluble bags are great for maintaining color throughout warmer months.

**Directions:** Apply by opening outer foil bag, carefully remove water soluble bag, and toss bag into water. Color will slowly disperse and mix uniformly throughout the entire body of water over approximately a 24 hour period. Handle bags with care. Dye in each bag is highly concentrated and will stain if broken open. Water soluble bags are very sensitive to moisture and will dissolve easily. Take caution by wearing gloves to avoid staining on hands. If on hands wash with a mild bleach water.

This product is safe and harmless to all animals and vegetation. Will not stain or harm water fowl, fish or livestock once diluted.

**Precautions:**  
 Avoid contact with eyes, skin or clothing. If ingested, rinse mouth. Do NOT induce vomiting. Obtain medical attention.
