

PRO BRUSH & POISON IVY KILLER

Pro Brush and Poison Ivy Killer is a post-emergent herbicide that provides control of most woody plants and brush, as well as annual and perennial broadleaf weeds. Formulated as a low volatile ester, the combination of triclopyr and 2,4-D provides outstanding weed control in both cool and warm weather.

% ACTIVE INGREDIENTS

2, 4-dichlorophenoxyacetic acid, butoxyethyl ester...34.3%
Triclopyr BEE: 3, 5, 6-trichloro-2-pyridinyloxyacetic acid, butoxyethyl ester.....16.5%

PACKAGING

Quart, Half Gallon, Gallon

FOR USE ON TURF

Broadleaf treatment of commercial and recreational turf, commercial sod farms

Apply 2 to 4 pints (0.5 to 1 lb. 2, 4-D ai) of Pro Brush and Poison Ivy Killer in enough water to make 20 to 200 gallons total spray per acre to control broadleaf weeds growing in tall fescue, bluegrass, or perennial ryegrass turf. Do not use on other grass species, such as bentgrass or St. Augustine grass, unless injury can be tolerated.

RESTRICTIONS

For broadcast application on commercial, recreational turf

Generally, the lower application rates within the specified range will provide satisfactory control of sensitive weed species. The higher the application rates within the specified range will be required for dense infestations of perennial weeds, for adverse/extreme environmental conditions, or for weeds hardened off or more mature.

Post-Emergence

- Limited to 2 applications per year
- Use a maximum of 4 pints of product (1.5 lbs. 2,4-D ai) per acre per application
- The maximum seasonal rate is 8 pints of product per acre (2 lbs. 2,4-D ai/A), excluding spot treatments

PRODUCT BENEFITS

- Provides excellent control of brush and woody plants
- Controls broadleaf weeds with no harm to turf
- Low volatility formulation
- Can be applied by all types of sprayers
- Rainfast within 2 hours post application
- Flexible application timing - can be applied in-season or during dormant periods
- Apply to actively growing foliage for best results

LABELED USES

- Commercial and recreational turf
- Commercial sod
- Rangeland
- Permanent grass pastures
- Conservation reserve program (CRP) acres
- Fence rows
- Non-irrigation ditchbanks
- Industrial sites
